Set A

Quiz

Course : CSE 4165: Web Programming

Trimester & Year: Spring 2026

Name :

Marks : 10 (5)

Time : 20 minutes

ID:

SN	Questions	Marks
1	Write a javascript code that generates a random number between 200 and 400 and prints the number in the console.	3
2	Create a PHP class named Employee with a constructor and two member functions. The constructor should accept the employee's name, basic salary, and bonus, and initialize the class properties. Create a member function calculateTotalSalary() that calculates and returns the total salary by adding the basic salary and bonus. Create another member function printDetails() that displays the employee's name, basic salary, bonus, and total salary (using the calculateTotalSalary function). Finally, create an object of the Employee class and call the printDetails() function to display the information.	3

3 Consider a table named **employees** in a database called **bank**.

4

Write a PHP program to perform the following tasks:

1. Establish a connection to the **bank** database using an appropriate PHP database object.
2. Using SQL queries and php, print the total salary and the average salary (you must use the **fetch function and loop**).

emp_id	name	salary
101	Bruce	35000
102	Clark	42000
103	Wally	38000
